Description

ODM98 foil

ODM98 foil or thin flexible sheet material can be used as light source diffuse reflectors as diffuse transmitting windows and in many different applications. Gigahertz-Optik stocks ODM98 foils in different thicknesses and different widths supplied in minimum 1 m length. Custom thicknesses and widths in OEM quantities are available on request. Contact our sales department to discuss your foil requirements.

Note: The manufacturing and cutting process does not allow raw foil to be supplied with an optical finish surface.

Specifications
