Product tags: VIS

Description

Traditional lux meters are increasingly being replaced by spectral light meters such as the MSC15. However, the lighting industry also needs high accuracy spectral light meters that can handle more complex measurements. These include measurement of pulse width modulated light and the ability to measure both internal and external illumination, determination of thermal transient behavior of lamps, and so on. The primary criterion that such meters must always meet is the quality of their photometric features. Additional electronic features may improve usability and display quality, but they cannot compensate for substandard measurement results.

Manufacturers of lamps and luminaires for general lighting purposes must consider light flicker when qualifying product safety in terms of EMC immunity requirements. In addition to the influence of mains voltage fluctuations, flicker effects caused by the lamp and the luminaire itself must be taken into account.

With the BTS256-EF, Gigahertz-Optik GmbH, a renowned measuring device manufacturer, offers a universal measuring device for the determination of all relevant light parameters in general lighting. Combined with a programmable AC source, the BTS256-EF becomes a comprehensive flicker test system for lamps and luminaires including voltage fluctuation immunity tests IEC TR 61547-1:2017.

BTS256-EF – Highquality, spectral light and color measurement meter

The BTS256-EF is a high-quality measuring device for photometric and colorimetric measurement of general lighting products and conditions. A special feature of the meter is a Bi-Tec sensor. This consists of a fast photodiode and a CMOS array detector. Thus, the meter supports all the requirements of a modern light meter:

- Cosine field of view illuminance measurement for accurate evaluation of extended illumination (class B DIN 5032 part 7 or AA according to JIS C 1609-1:2006)
- Flicker measurement
- Spectral measurement technology, required for LED light, color, color rendering, color effects
- Photodiode for synchronization to pulse width modulated light and flicker measurement
- alpha-opic measurement (CIE: TN-003)
- Compact and robust design for mobile use

BTS256-EF – Flicker meter

In its function as a light-flicker meter, the BTS256-EF supports all current [flicker measurements](#):

- Percent Flicker (IES: RP-16-10, CIE: TN-006)
- Flicker Index (IES: RP-16-10, CIE: TN-006)

BTS256-EF for complex measurements in lighting technology, including flicker measurement

Principle illustration of the BTS256-EF

- 1) BTS256-EF
- 2) Precision cosine diffuser
- 3) BiTec sensor with Si photodiode, CMOS diode array spectrometer and shutter
- 4) Photometric Si-photodiode with fast amplifier
- 5) Microprocessor
- 6) Display
- 7) Control Buttons
- 8) USB 2.0 interface
- 9) Light incident

- FFT Frequency component analysis
- P_{st} Short term flicker severity (CIE: TN-006, IEC TR 61547)
- Stroboscopic Visibility Measure, SVM (CIE: TN-006, IEC TR 63158)
- M_p ASSIST Flicker perception metric

BTS256-EF – Meter for photosynthetically active radiation (PAR) in plant growth

LED grow lights need to be measured in terms of the Photosynthetically Active Radiation (PAR) they produce. This function is supported by the BTS256-EF. The Photosynthetic Photon Flux Density (PPFD) in $\mu\text{mol}/(\text{m}^2 \cdot \text{s})$ can be measured which is a measure of the total number of photons within the PAR wavelength range that reach a surface each second per square meter area. Furthermore, the daylight integral (DLI) can be displayed which represents the total amount of photosynthetically active radiation received by a plant in the course of a day.

Calibration of the BTS256-EF

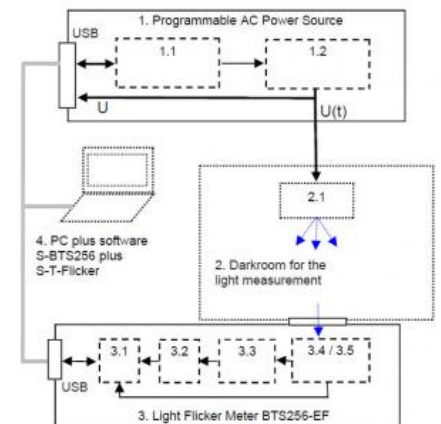

One essential quality feature of photometric devices is their precise and traceable calibration. The BTS256-EF is calibrated by Gigahertz-Optik's calibration laboratory that was accredited by DAkkS (D-K-15047-01-00) for the *spectral responsivity* and *spectral irradiance* according to ISO/IEC 17025. The calibration also included the corresponding accessory components. Every device is delivered with its respective calibration certificate.

Options for the BTS256-EF light meter

- Software development kit for integration of the device in the user's own software
- In connection with the software tool S-T-Flicker and the programmable AC Source LPS-CH-500 Gigahertz-Optik GmbH offers a functional extension of the BTS256-EF for an test system according to the IEC TR 61547-1:2017 Equipment for general lighting purposes - EMC immunity requirements - Part 1: An objective light flicker and fluctuation immunity test method.

BTS256-EF light meter with precise cosine field of view function

Principle illustration light-flicker test system

- 1.1 Test waveform generator
- 1.2 Amplifier
 - 2.1 Lamp/luminaire under test
- 3.1 Data processor light
- 3.2 Light data acquisition
- 3.3 Anti-aliasing filter
- 3.4 Fast photodetector
- 3.5 Spectral radiometer
- 4. User software with flicker measurement tool

Specifications

General

Short description	Spectroradiometer for the illuminance (photopic, scotopic, melanopic), PAR, spectrum, light color, color rendering index, and flicker
Main features	Mobile measurement device, BiTec sensor with a V-lambda photodiode and low stray light CMOS spectroradiometer with a 10 nm optical bandwidth and additional optical bandwidth correction (CIE214), remote-controlled offset shutter, precise cosine-corrected field of view, data logger, automatic PWM synchronization, flicker measurement of P_{st} , SVM, Flicker Index, etc.
Measurement range	1 lx to 199,000 lx, 360 nm to 830 nm, flicker frequency between 0.25 Hz and 5 kHz
typical applications	Precise spectral light meter for the lighting industry
Calibration	Factory calibration, traceable to international standards

Product																																																																				
Sensor	class B DIN 5032 part 7 or AA according to JIS C 1609-1:2006 class A DIN 5032 part 7 for f1' and f4, or general precision class according to JIS C 1609-1:2006 class L DIN 5032 part 7 for U response, IR response, f3, f6 and f7																																																																			
Sensor	Bi-Technology sensor with a photometric broadband detector and a array spectrometer. Integrated aperture for automatic dark signal adjustment.																																																																			
Input optics	Diffuser window with 20mm diameter, cosine corrected field of view, f2 Error ≤ 3%																																																																			
Filter	Spectral responsivity with fine CIE photometric matching. Online correction of the photometric matching through spectral measurement data (spectral mismatch factor correction)																																																																			
Flicker	<p>Measurands: Percent flicker (IES:RP-16-10, CIE:TN-006), flicker index (IES:RP-16-10, CIE:TN-006), flicker frequency, fast fourier transformation (FFT), P_{st} short-term flicker severity Pst (CIE:TN-006, IEC TR 61547), stroboscopic effect visibility measure SVM (CIE:TN-006, IEC TR 63158), Mp ASSIST</p> <p>Using as a handheld device without software, limited by internal storage:</p> <table border="1"> <thead> <tr> <th>Measurement Time (Sensor)</th> <th>Measurement Time (Flicker)</th> <th>Sampling Rate</th> <th>Upper Cut-Off Frequency</th> <th>Lower Cut-Off Frequency</th> </tr> </thead> <tbody> <tr> <td>50 ms</td> <td>41.0 ms</td> <td>20 μs</td> <td>5 kHz</td> <td>60 Hz</td> </tr> <tr> <td>100 ms</td> <td>81.9 ms</td> <td>40 μs</td> <td>5 kHz</td> <td>30 Hz</td> </tr> <tr> <td>200 ms</td> <td>163.8 ms</td> <td>80 μs</td> <td>2.5 kHz</td> <td>15 Hz</td> </tr> <tr> <td>500 ms</td> <td>327.7 ms</td> <td>160 μs</td> <td>1.2 kHz</td> <td>8 Hz</td> </tr> <tr> <td>1000 ms</td> <td>655.4 ms</td> <td>320 μs</td> <td>0.6 kHz</td> <td>4 Hz</td> </tr> <tr> <td>3000 ms</td> <td>2620 ms</td> <td>1280 μs</td> <td>150 Hz</td> <td>1 Hz</td> </tr> <tr> <td>6000 ms</td> <td>5240 ms</td> <td>2560 μs</td> <td>75 Hz</td> <td>0.5 Hz</td> </tr> <tr> <td>12000 ms</td> <td>10486 ms</td> <td>5120 μs</td> <td>33 Hz</td> <td>0.25 Hz</td> </tr> </tbody> </table> <p>By Software controlled use the above analysis or the following high resolution analysis is possible:</p> <table border="1"> <thead> <tr> <th>Measurement Time (Sensor)</th> <th>Measurement Time (Flicker)</th> <th>Sampling Rate</th> <th>Upper Cut-Off Frequency</th> <th>Lower Cut-Off Frequency</th> <th>Frequency uncertainty acceptable S/N ratio</th> </tr> </thead> <tbody> <tr> <td>5 ms</td> <td>5 ms</td> <td>20 μs min. Calibration uncertainty	Illuminance +/- 2.2%																																																																			
Spectral Detector																																																																				
Chip	CMOS diode-array																																																																			
spectral range	(360 - 830) nm																																																																			
Optical Bandwidth	10 nm, mathematical optical bandwidth correction according to CIE 214 can be automatically applied																																																																			
Data Resolution	1 nm																																																																			
Integration Time	(5.2 - 30000) ms																																																																			
Shutter	Automatic aperture for dark signal measurements with the same integration time as that of light measurements. Aperture delay = 100ms.																																																																			

f2 Cosine Error

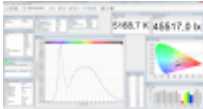

spectral responsivity

Miscellaneous

Microprocessor	16Bit, 25ns instruction cycle time
Power Supply	5VDC, 450mA per USB
Interface	USB 2.0 (Type B USB) Option WiFi: WiFi 2,4 GHz (external antenna, range > 100m)
temperature range	Operation: -10°C bis +30°C Storage: -10°C bis +50°C
Housing	Splashproof IP54
Transport case	333mm x 280mm x 70mm, 650g
Dimensions	159mm x 85mm x 45mm (Length x Width x Height)
Weight	500 g
