## Description

### The BTS256-LED light meter

In its standalone mode, the compact [BTS256-LED](#) meter is designed for the convenient measurement of luminous flux, spectrum, color, and color rendering index of single LEDs. A key feature is the conical measurement port at the entry of the internal integrating sphere which enables the measurement of onboard LEDs. The bayonet connector used to attach the conical adapter makes it possible to combine the BTS256-LED with other accessory components. Gigahertz-Optik offers different accessories as part of the [BTS256-LED Plus Concept](#) which greatly extends the measurement capabilities of the BTS256-LED.

### Enhancement of the BTS256-LED using the ISD-50HF-V01 or ISD-50HF-V02 integrating sphere

The 50 cm diameter ISD-50HF-V01 integrating sphere makes it possible to measure the luminous flux, spectrum, color, and color rendering index of extra-large LED lamps with 2pi and 4pi radiation characteristics. One half of the sphere can be opened in order to fix LED lamps onto the sample holder at the center of the sphere. The height of the sample holder can be adjusted.

The ISD-50HF-V02 is offered as an alternative and has an additional 2pi measurement port with a 127 mm diameter. This remains closed whenever it is not in use.

Both variants are equipped with an auxiliary lamp. The BTS256-LED can still be used to measure single, onboard LEDs. A bayonet adapter enables connection of the device onto the ISD-50HF integrating sphere.

### Calibration

One essential quality feature of photometric devices is their precise and traceable calibration. The ISD-50-HF with the BTS256-LED is calibrated by Gigahertz-Optik's calibration laboratory that is accredited by DAkkS (D-K-15047-01-00) for the *spectral responsivity* and *spectral irradiance* according to ISO/IEC 17025. Calibration for the luminous flux is performed using a BN-LHSF-104, which is placed at the sphere center. Spheres with an additional measurement port require additional calibration with a [BN-LHSF-2P-20](#) calibration lamp, which has 2pi radiation characteristics in the integrating sphere. Every device comes with its respective calibration certificate.

Additional measurement port with a 127 mm diameter. Height-adjustable sample holder. Spectroradiometer can be used without the integrating sphere to measure single LEDs</p>
Measurement range	1.2 lm to 120,000 lm, 360 nm to 830 nm
typical applications	Inspection of incoming products (LED lamps), quality assurance in production processes, design
Calibration	Factory calibration. Traceable to international standards
Product	
Calibration uncertainty	Luminous flux calibration +/-8%
Input optic - ISD-50HF-V01	Integrating sphere with barium sulfate coating. Measurement port with 63.5mm diameter. Port reducer with 50.8mm diameter and knife-edges. 12V/20W Halogen auxiliary lamp. Table stand.
Input optic - ISD-50HF-V02	Integrating sphere with barium sulfate coating. 500mm internal diameter. An openable hemisphere. Additional measurement port with a 127mm diameter in the fixed hemisphere. Port plugs for closure of the measurement port. UMSH-AP-500 height-adjustable sample holder. Two-way baffle between the detector and the sphere center as well as the detector and measurement port. Shadowing to the sphere meter for lamps with an extent of up to 100mm. 12V/50W Halogen auxiliary lamp. Table stand.
